**Here's some information about the activities your student did with us. Links at the bottom will help you explore further. Enjoy!**

### **What did we do (content, skills, data collection)?**

This week, we took what we've learned about green energy and building circuits so far, and used it to have a mini competition of energy sources.

### **How did we do it (materials & methods)?**

We split into groups and designed and built custom energy generators using the knowledge and materials we had for solar, wind, and water energy. We tested each group's generator to see which combination provided the most power.

### **Where can we find out more?**

Wind vs. Solar: <https://elemental.green/wind-vs-solar-which-power-source-is-better>
