

Here's some information about the activities your student did with us. The links at the bottom will help you explore further. Enjoy!

What did we do? (content, skills, data collection)

We made Star Jar night lights and began our coffee filter planet projects. Then we learned what our astronomically accurate zodiac constellations are.

How did we do it? (materials & methods)

We made our star jars by poking holes in aluminum foil, then placing the aluminum foil in clear jars containing electric candles.

We made coffee filter planets by using the capillary action of coffee filters. We colored all over the filters with markers, then sprayed them with water.

Where can we find out more?
