

Here's some information about the activities your student did with us. The links at the bottom will help you explore further. Enjoy!

What did we do? (content, skills, data collection)

Continued coffee filter planets, made borax crystals

How did we do it? (materials & methods)

With our coffee filter planets dry, we were able to add glitter, sequins, and other decoration to make them truly unique planets.

We dissolved borax in hot water, and placed a pipe cleaner creation in the solution. We learned that evaporation can cause some substances (like borax, salt, and sugar) to crystallize!

Where can we find out more?
