

Here's some information about the activities your student did with us. The links at the bottom will help you explore further. Enjoy!

What did we do? (content, skills, data collection)

Harvested our Borax crystals. Finished our coffee filter planet project by laminating them. Learned about the moon phases by making a lunar phases wheel.

How did we do it? (materials & methods)

We made a lunar phases wheel to show us the names and appearance of each moon phase, and to learn the order of these phases. Once we learned how long a lunar phase cycle is, we realized we could use this wheel to estimate the lunar phase for any date in the future!

Where can we find out more?
